

MUGGINS MATH SCHOOL PACKAGE PLANS AND WORKSHOP INFORMATION

We are often asked by teachers, principals, and coordinators for help in deciding what games and manipulatives and what quantities are needed to best meet the needs of the teachers and students within their schools or districts. To assist with these decisions, we have designed two basic plans. We can also customize any purchase order.

The **Starter Package Plans for Small, Medium, and Large Schools** give all of the **essential games and manipulatives** for K - 5th and /or 6th - 12th in **classroom size quantities** and meet the educational and budgetary needs of any size school. The teachers would **share the materials** through a check-out system through the Media Center. **Other games may be substituted for those suggested.** Details of each plan may be viewed by clicking on the blue hyperlink above. On your purchase order be sure to specify **Starter Package Plan (Small, Medium, or Large)** and **K - 5th and/or 6th - 12th** as well as your game selections and quantities of each . Shipping is **12%** of the total. You may purchase as many packages as you wish. **Please call with any questions or to discuss your selections.**

Sampler Package Plans are designed to give a **Sampler** of **grade-appropriate** manipulative kits and games in both wooden and wipe-off formats for each teacher. Details of this plan for each grade level and/or special area may be viewed by clicking on the preceding blue hyperlink . This plan works especially well for **district wide training in specialty areas such as Title I, Special Education, and Gifted programs** to introduce the Muggins Math materials to the teachers.

Workshops by Alan, Sue, or Heidi Schuler, the developers of the Muggins Math Series, can also be provided **to accompany** not only **these packages** but also **any purchase order** of materials **or for schools who already have the materials** but want new or refresher training. Muggins Math Workshops have received nothing but rave reviews since their beginning in 1997. The workshops are fun, hands-on, and interactive resulting in the teachers being confident in their knowledge of the materials and enthusiastic about implementing them the very next day with their students. Click on the blue hyperlink above for more details.
